Creative Features

The top two keys on the left panel are reserved for the Creative Feature effects of each set. The Creative Feature keys included on Circuit Solutions® cartridges are Shadow and Blackout.

When selected, the Shadow Feature creates a proportionally larger shadow image of every character that is selected. When the Shadow Feature is active, the Shadow key will be backlit in green.

When selected, the Blackout Feature creates an image that is solid and blacked out. When the Blackout Feature is active, the Blackout key will be backlit in green.

To use a Creative Feature key, just select it prior to pushing the CUT button. The characters displayed on the screen will then be cut in the style of the selected Creative Feature.

TIP: A feature can be selected before or after a character has been selected, but before the CUT button is pressed. Once pressed, a Feature key will remain until it is turned off in one of the following ways: the Feature key is pressed a second time, or the Reset All key is pressed.

For complete instructions see your Circuit® user manual or visit www.cricut.com.
