# My World™

This handbook contains instructions specific to the My World™ cartridge.  
For complete instructions refer to the Cricut™ user manual included with your machine  
or visit [www.cricut.com](http://www.cricut.com)

The characters on the My World™ cartridge were designed by:

Annette Ward

Drawing and lettering have been my passion since I was a young girl. I turned my passion into a business and taught calligraphy classes after my college years. Soon I began designing clip art and tole painting books, and I currently design stamps, digital images, and many paper craft items. I love creating, and admire all the imaginative things you do with my designs. Thank you for your inspiration!

Annette resides with her husband in Sandy, Utah. She has five children and enjoys interior design, boating, spending time with her family, playing tennis, and—of course—crafting!

## ABOUT THIS CARTRIDGE

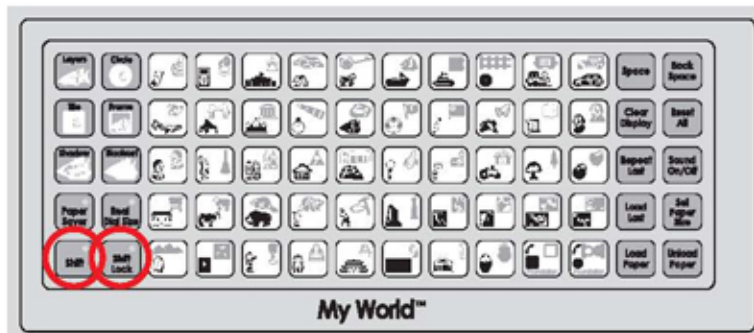

(This handbook contains instructions specific to the My World™ cartridge. For complete instructions refer to the Cricut™ user manual included with your machine or visit [www.cricut.com](http://www.cricut.com))

### Selecting Characters

How to use the **Shift** and **Shift Lock** keys

To select a character from the upper right corner of a key, use the **Shift** key on the keypad. You don't need to hold it down. Just press **Shift** once and make your selection.

Use the **Shift Lock** key to select more than one character at a time from the upper right corners of keys. Press the **Shift Lock** key again to deselect it.

## What Is Real Dial Size?

Most base characters are measured from the lowest possible point to the highest, but in My World™ the black (non-shifted) characters and the gray (shifted) characters are created at the same height. If Real Dial Size is selected, all characters will be cut according to the selected dial size.

There are two exceptions. Even if Real Dial Size is selected, the Train Car is proportionate to the Train Engine, and the Companions are proportionate to the non-shift Foundations. (Read more about Companion and Foundation keys on page 7.)

Real Dial Size OFF

Real Dial Size ON

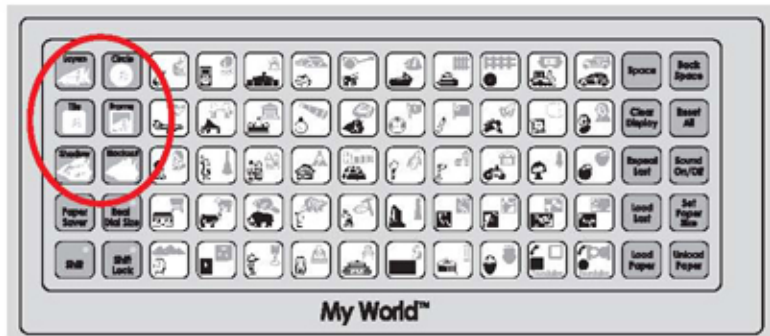

## What Are Creative Feature Keys?

The top three pairs of keys on the left panel are reserved for the Creative Feature effects of each set. These Features vary with each specific cartridge, providing greater versatility and thousands of options!

The Creative Feature keys included on the My World™ cartridge are **Layers**, **Circle**, **Tile**, **Frame**, **Shadow**, and **Blackout**.

To use a Creative Feature key, just select it prior to pressing the CUT button. The characters displayed on the screen will then be cut in the style of the selected Creative Feature. Due to their sizes and shapes, a Feature may not work with all shapes. Please refer to the Icon Gallery for Creative Feature details.

**TIP:** A Feature can be selected before or after a character has been selected, but before the CUT button is pressed. Once pressed, a Feature key will remain lit until it is turned off in one of the following ways: the Feature key is pressed a second time or the **Reset All** key is pressed.

In the Icon Gallery, you will find a diagram for every character on your cartridge. The color change indicates that the image on the upper right is created using the **Shift** key and the image on the lower left is created without **Shift**. Using the Icon Gallery, you can see at a glance which Creative Features are available to use with the character that you have selected. **You will find that some characters are very detailed and cut better at a larger dial size.**
