Pink Journey
Campagne Rose

Creative Features
The top two layers on the left panel are reserved for the Creative Feature effects of each set. The Creative Feature texts included on Cricut® Solution™ cards are Shadow and Blackout.

When selected, the Shadow feature creates a proportionally larger shadow image of every character that is selected. When the Shadow feature is active the Shadow box will be backlit in green.

The Blackout feature is the solid version of the base shape. When the Blackout feature is active the Blackout box will be backlit in green.

To use a Creative Feature, just select it prior to pushing the Cut button. The characters displayed on the screen will then be cut in the style of the selected Creative Feature.

TP: A feature can be selected before or after a character has been selected, but before the Cut button is pressed. Once pressed, a feature will remain if until it is turned off in one of the following ways: the feature button is pressed a second time, or the Reset All key is pressed.

Layers
Some of the base icons have coordinating layer characters. These are represented on the keyboard overlay in grey. To cut a layer just press the Shift key once, then press your selection on the keyboard overlay.

For complete instructions see your Cricut® user manual or visit www.cricut.com
