

## 9. Edit tool bar

### E. Flipping or Mirroring an image

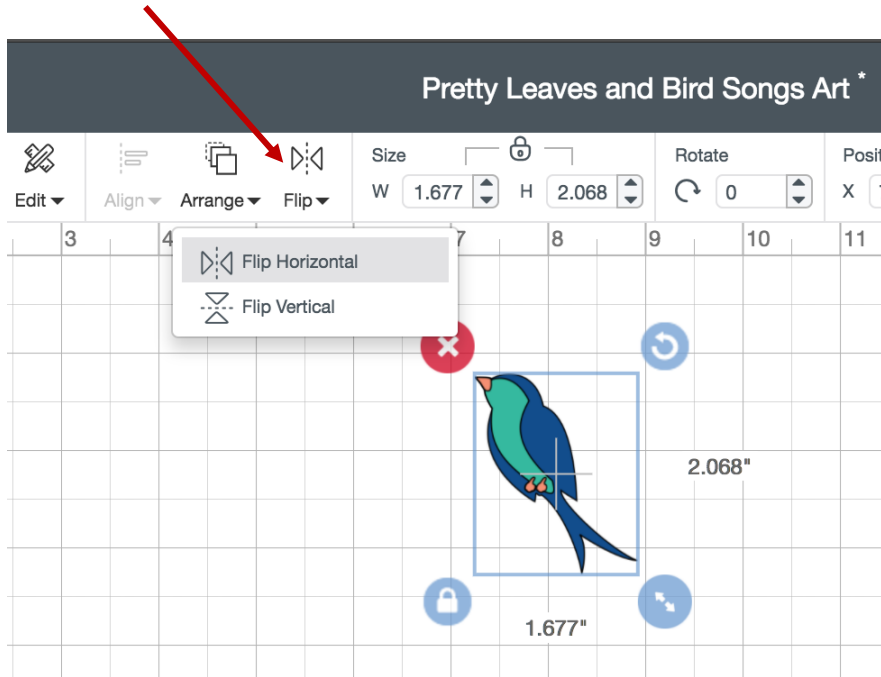

Cricut Design Space allows you to flip the direction of an image vertically or horizontally on the Canvas using the Flip buttons in the Edit Bar.

#### Option 1 Flip horizontally

**Step 1** Select the image on the Canvas so that the Bounding Box appears.

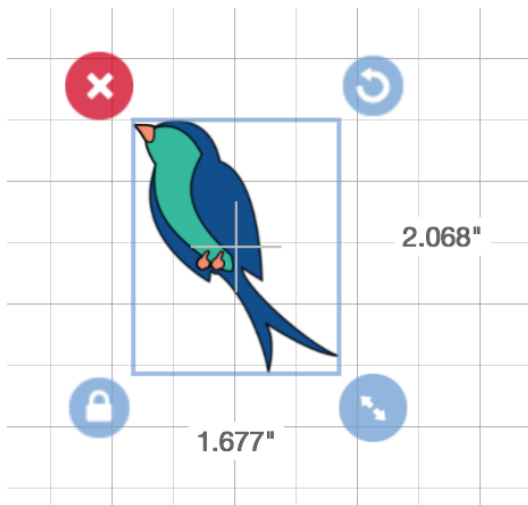

**Step 2** To flip horizontally, click *Flip* in the Edit Bar. Select Flip Horizontal from the drop-down menu to flip your image. Rotation of the image will remain at 0 degrees. Click the button again or click *Undo* to return to the original position.

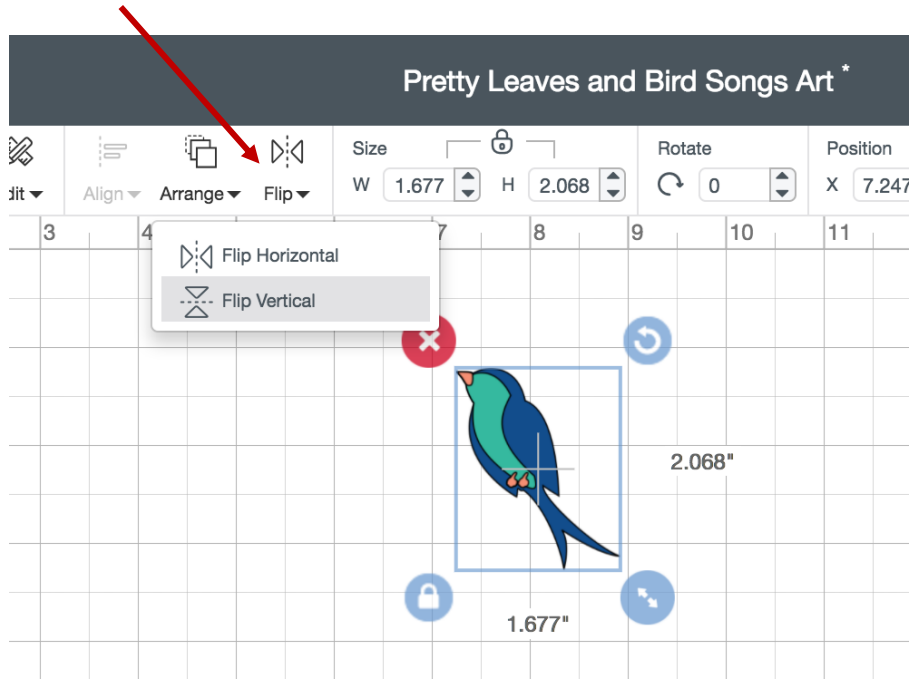

*Tip: While changes in rotation do not appear on the Mat Preview screen, flipped images on the Canvas will hold changes on the Mat Preview screen.*

## Option 2 Flip vertically

**Step 1** Select the image on the Canvas so that the Bounding Box appears.

**Step 2** To flip vertically, click the Flip option in the Edit Bar. Select Flip Vertical from the drop-down menu to flip your image. Rotation of the image will remain at 0 degrees. Click the button again or click *Undo* to return to the original position.

*Tip: If you plan to cut iron-on, complete your design on the Canvas first. You can then mirror or flip each mat individually on the Mat Preview by checking the Flip (for iron-on) checkbox.*
