How Do I Use Images in Design Space?

The Cricut Image Library contains over 50,000 images, with more being added all the time. You don’t need to own an image to try it out - Cricut Design Space allows you to design with an image before you buy so you can make sure it will work on the project. Additionally, you can upload your own images and cut them out with your Explore or Maker machine.

Note: Available images may vary by region based on image licensing agreements.

Let’s Start

1. Sign in to Design Space and create a new project.
2. Click Images on left side of the design screen for Windows/Mac computer, or tap the Image button at the bottom left corner of the screen in the iOS App.
3. Here you can browse, search, and filter images as needed.
   - All Images - View featured images or search for a specific image from the entire Cricut library.
   - Categories - Browse for images by selecting one of the image categories.
• **Cartridges** - Peruse an alphabetical list of over 400 Cricut cartridges (image sets) or search for a specific one.

4. You can select multiple images and insert them into your project at the same time.
5. Once the images are inserted, you can edit them as required for your project. The bounding box is the box that appears around your text when it is selected. Each corner of the bounding box allows you to make a quick edit.

Using images in Cricut Basics:

Cricut Basics iOS App allows you to quickly select an image from the Cricut Library and cut it with your Explore machine. Currently, the app doesn’t support any advanced editing options, besides changing the size of the image. For full functionality, please use the Cricut Design Space App for iOS, or Cricut Design Space on a Windows/Mac computer.
